## EXECUTIVE SUMMARY

During the 1994 - 1997 field seasons a total of 15 lichen air quality biomonitoring reference sites were established in the Manti La Sal National Forest. To date 143 lichen species in 48 genera have been identified from our collections. Typical of Intermountain Area lichen floras most of the species from the Manti La Sal National Forest are of the crustose growth form (51% or 73 species). During the course of our study lichen specimens were collected from five substrates (rocks, bark/lignum, soil, moss/detritus, and other lichens), with most species occurring on rock substrates (57% or 82 species). A total of 33 elemental analysis samples have been collected from the 15 air quality biomonitoring reference sites. Included in this collection are a total of 10 sensitive indicator species collected from two substrates (rock and bark). An average of 10.1 (range: 3-14) sensitive indicator species were collected from each reference site. This compares with an average of 6.3 along the Wasatch Front; 8.0 in the Bridger Wilderness Area (western Wyoming); and 10.3 in the High Uintas Wilderness Area (northeastern Utah). However, there are some discrepancies in the average number of sensitive indicator species per reference site between the Monticello-Moab districts (11.8) and the Price, San Pete, and Ferron districts (8.9). This difference is likely related, at least in part, to the general proximity of the Price, San Pete, and Ferron sites to the air pollution problems of the Wasatch Front.

Elemental analysis data suggest several areas of concern. Sulfur concentrations in lichen tissues from four sites (Rilda Canyon, Pine Ridge, Elk Ridge, and Dark Canyon) were elevated (0.196-0.27%). Furthermore, thallus concentrations of arsenic, nickel, and chromium are among the highest reported for the entire Intermountain Area. Lead concentrations are generally well within background levels; however, four samples from three sites (Chris' Canyon, Great Basin Experiment Station, and South of Wales Top) were somewhat elevated (52.9-78.7 ppm), especially when compared with most other Rocky Mountain reference sites. Copper/zinc ratios were well within background levels ( $\leq 0.5$ ) at all sites (0.054 – 0.39). However, Fe/Ti ratios were slightly elevated in four samples (343, 447, 491, and 492), moderately elevated in 3 samples (339, 340, and 453); and elevated in one sample (450), ranging between 8.46 and 11.07 with background levels generally falling between 6 and 8. Elemental analysis data suggest three general areas of concern: 1) Rilda Canyon in Carbon County with elevated sulfur and a moderately elevated Fe/Ti ratio; 2) Pine Ridge, Elk Ridge, and Dark Canyon in San Juan County with elevated sulfur; 3) Chris' Canyon, Great Basin Experiment Station, South of Wales Top, and Orange-Olsen Guard Station in San Pete County with some combination of elevated heavy metals including lead, chromium, and arsenic; as well as elevated Fe/Ti ratios. Overall, this pattern of pollutant element accumulation by lichens is remarkably similar to data collected at air quality biomonitoring reference sites established in the Uinta National Forest along the heavily populated and industrialized Wasatch Front. It appears that at least some of the reference sites in the Manti-La Sal National Forest may be experiencing some air pollution-related impact, with reference sites in the San Pete, Ferron, and Price ranger districts demonstrating accumulation of selected heavy metals and at least somewhat elevated Fe/Ti ratios. While reference sites in the Monticello District show elevated sulfur concentrations.

High species diversity, the general absence of bleached and/or necrotic thalli, and the moderately high average number of sensitive indicator species per site (10.1) suggests that overall the lichen flora of the Manti-LaSal National Forest has not been heavily impacted by air pollution. Generally, reevaluation of pollutant levels in tissues of sensitive indicator species should be conducted every 5-8 years. However, some sites with elevated pollutant levels and/or reduced numbers of sensitive indicator species (i.e. Rilda Canyon, Wales Top, Great Basin Experimental Range Station, Chris' Canyon, Pine Ridge, Elk Ridge, and Dark Canyon) should be reevaluated every 3-5 years. To insure better long term coverage and greater sensitivity to potential air pollution problem areas, several additional air quality biomonitoring reference sites should be established in the forest (see recommendations section for details).

## INTRODUCTION

### PROJECT OBJECTIVES:

1. Establish 15 air quality biomonitoring reference sites in the Manti La Sal National Forest.
2. Collect, curate, and identify lichen species from various habitats and substrates at each reference site.
3. Identify 1-3 pollution sensitive lichen species at each reference site. Collect enough tissue of at least one sensitive indicator species (approximately 3-6 grams dry weight) from each reference site for elemental analyses. Rare species will not be collected for analysis, but their distribution will be noted.
4. Determine baseline thallus concentrations of 20 potential pollutant elements ( including sulfur, selenium, arsenic, copper, bromine, manganese, lead, vanadium, potassium, iron, etc. ), using replicate samples of at least one documented pollution-sensitive species collected at each reference site. Samples will be analyzed using Proton Induced X-ray Emission (PIXE) techniques.
5. Prepare and submit the final report by 31 December 2000.

### LICHENS AS BIOLOGICAL INDICATORS OF AIR QUALITY:

Lichens have been used extensively as bioindicators of air quality (Fields & St. Clair 1984; St. Clair 1989; Richardson 1992). Hale (1983) noted that lichens have been used in three basic ways to monitor the effects of air pollution on biological communities: 1) elemental analysis of lichen tissues, 2) mapping of all (or selected) lichen species found in areas adjacent to pollution sources, and 3) transplant studies. Currently, the most common approach involves a floristic survey along with elemental analyses of sensitive indicator species (St. Clair and Newberry 1995; Wetmore 1989).

As lichens accumulate a variety of pollutants from atmospheric outwash, lichen tissues provide a record of the kinds and relative quantities of air pollutants in any particular airshed (Schutte 1977; Wetmore 1989; Rope & Pearson 1990). Pollutant accumulation patterns for specific elements have been monitored over time by correlating thallus growth rates with pollutant concentrations in precisely excised portions of lichen thalli (Lawrey & Hale 1981). Changes in lichen physiological parameters indicate pollution-related damage long before other, more easily discernible characteristics such as changes in thallus color, morphology, or community structure become apparent (Fields & St. Clair 1984).

Lists of pollution-sensitive lichen species are frequently published in conjunction with floristic and ecological surveys (Rushforth et al. 1982; Wetmore 1989). As certain lichen species are inherently more sensitive to airborne contaminants, air quality can be effectively monitored by occasionally reevaluating lichen community and/or physiological parameters. Air pollution-related changes can then be documented by comparing follow up data with original baseline data.

### GENERAL HABITAT DESCRIPTION FOR THE MANTI-LA SAL NATIONAL FOREST, UTAH:

The Manti La Sal National Forest administers a wide variety of natural landscapes, ranging from alpine tundra to lowlands dominated by various desert shrub species. The forest consists of four distinct land areas two located in central Utah and contained within the triangle formed by interstate highways 15 and 70 on the west and south respectively and U.S. Highway 6 on the east. The western most central Utah unit is technically in the Uinta National Forest but is administered by the Manti La Sal National Forest. In addition two units are located in the southeast corner of the

state one east of Moab and the other west of Monticello. The Moab unit encompasses much of the La Sal Mountains, a cluster of partially eroded laccolith domes formed from intrusive igneous rocks; while the Monticello unit contains the Abajo Mountains, which were formed in much the same way.

The two central Utah areas lie within the geographical region generally referred to as the Wasatch Plateau, which is part of the much larger Colorado Plateau region. While the other two areas are located in the Paradox Fold Belt of the Colorado Plateau. Habitat types range from mesic riparian communities along canyon streams to drier upland communities including desert shrubland to pinyon-juniper woodland to mixed mountain brush to subalpine coniferous forests to alpine tundra. The geology of the forest is variable and complex and includes sandstones, conglomerates, shales, and volcanics. To date a total of 15 reference sites have been established in the forest (Figure 1).

#### **LICHEN BIOMONITORING REFERENCE SITES IN THE MANTI-LA SAL NATIONAL FOREST, UTAH:**

During the 1994 - 1997 field seasons a total of 15 air quality biomonitoring reference sites were established in Manti-La Sal National Forest. Specifically, reference sites have been established at the following locations:

**SITE #1:** 7 September 1994. Utah, Carbon County, Manti-La Sal National Forest, along U.S. Forest Service Road No.122, and Pontown Creek near forest boundary at 39° 47.545' north latitude; 111° 11.597' west longitude. Elevation: 2364 m (7800 feet).

**SITE #2:** 14 September 1994. Utah, Emery County, Manti-La Sal National Forest, Rilda Canyon along Rilda Creek (left fork) -ephemeral drainage at 39° 23.986' north latitude; 111° 09.742' west longitude. Elevation: 2515 m (8300 feet).

**SITE #3:** 20 September 1994. Utah, Emery County, Manti-La Sal National Forest, vicinity Orange-Olsen Guard Station at 39° 18.198' north latitude; 111° 18.002' west longitude. Elevation: 2212 m (7300 feet).

**SITE #4:** 28 September 1994. Utah, Utah County, Manti-La Sal National Forest, along U.S. Forest Service Road No. 070 (Lake Fork Creek) at 39° 57.968' north latitude; 111° 27.528' west longitude. Elevation: 1879 m (6200 feet).

**SITE #5:** 7 September 1995. Utah, Sanpete County, Manti-La Sal National Forest, vicinity of Great Basin Experimental Range Station at 39° 18.660' north latitude; 111° 29.260' west longitude. Elevation: 2774 m (9100 feet).

**SITE #6:** 13 September 1995. Utah, Sanpete County, Uinta National Forest (administered by Manti-LaSal National Forest), South of Wales Top (~1km) along U.S. Forest Service Road No. 157 at 39° 28.113' north latitude; 111° 42.451' west longitude. Elevation: 2438 m (8000 feet).

**SITE #7:** 13 September 1995. Utah, Juab County, Uinta National Forest (administered by Manti-LaSal National Forest), mouth of Chris' Canyon, at Confluence of Chicken Creek and Chris' Canyon at 39° 31.105' north latitude; 111° 44.009' west longitude. Elevation: 2164 m (7100 feet).

**SITE #8:** 28 September 1995. Utah, Emery County, Manti -La Sal National Forest, Ferron-Price Ranger District, top of East Mountain above Wilberg and Deer Creek Coal Mines at 39° 20.329' north latitude; 111° 08.850' west longitude. Elevation: 2000 m (9590 feet).

# MANTI-LA SAL NATIONAL FOREST

Figure 1a.

Figure 1b.

**SITE #9:** 30 September 1995. Utah, Sanpete County, Manti-La Sal National Forest, along Skyline Drive, ridge west of Horseshoe Flat at 39° 21.571' north latitude; 111° 26.236' west longitude. Elevation: 3261 m (10700 feet).

**SITE #10:** 27 June 1996. Utah, San Juan County, Manti-La Sal National Forest, along U.S. Forest Service Road No. 105, vicinity of Pine Ridge at 37° 53.521' north latitude; 109° 27.471' west longitude. Elevation: 2652 m (8700 feet).

**SITE #11:** 28 June 1996. Colorado, Montrose County, Manti La Sal National Forest, vicinity of Buckeye Reservoir at 38° 26.319' north latitude; 109° 01.604' west longitude. Elevation: 2377 m (7800 feet).

**SITE #12:** 28 June 1996. Utah, San Juan County, Manti La Sal National Forest, 1 km west of Geyser Pass, along U.S. Forest Service Road No. 071 at 38° 28.930' north latitude; 109° 14.125' west longitude. Elevation: 3231 m (10600 feet).

**SITE #13:** 29 June 1996. Utah, Grand County, Manti La Sal National Forest, near junction of U.S. Forest Service roads Nos. 062 and 067 at 38° 31.323' north latitude; 109° 20.361' west longitude. Elevation: 2408 m (7900 feet).

**SITE #14:** 19 June 1997. Utah, San Juan County, Manti La Sal National Forest, Elkridge, immediately north of Duck Lake, along U.S. Forest Road No. 088 at 37° 48.876' north latitude; 109° 46.418' west longitude. Elevation: 2621 m (8600 feet).

**SITE #15:** 20 June 1997. Utah, San Juan County, Manti La Sal National Forest, Dark Canyon Wilderness Area, along U.S. Forest Service Road No. 089 at 37° 46.841' north latitude; 109° 51.523' west longitude. Elevation: 2042 m (6700 feet).

## METHODS

### COLLECTION, CURATION, IDENTIFICATION AND DEPOSITION OF LICHEN SPECIMENS:

Because lichen distribution is influenced by substrate, moisture, and sunlight all available substrates and habitats at each reference site were carefully examined. Small amounts of each lichen species were either removed directly from the substrate, or depending on the species, with a small amount of the substrate (bark, wood, soil, or rock).

All specimens were placed in carefully labeled paper sacks and taken back to the BYU Herbarium of Nonvascular Cryptogams, where they were curated, identified, placed in permanent herbarium packets, and labeled with the current epithets and authors' names as well as detailed information about the collection site, habitat, and substrate. Herbarium (BRY C-) and collection numbers have been assigned to each specimen.

Species were identified using standard lichen keys and taxonomic treatises. Chemical spot tests and, where necessary, thin-layer chromatography techniques were used to finalize species identifications.

One set of specimens collected from each reference site will be permanently housed at the BYU Herbarium of Nonvascular Cryptogams in Provo, Utah. A second set of voucher specimens will be sent to any herbarium designated by the U.S. Forest Service.

### COLLECTION OF SENSITIVE INDICATOR SPECIES FOR ELEMENTAL ANALYSES:

After careful consideration of species, substrates, growth forms, documented/suspected pollution sensitivities, and general distribution patterns one to several pollution sensitive indicator

species were collected and returned to BYU where elemental analyses were performed using PIXE technology.

At each reference site sufficient material of at least one sensitive indicator species was collected for elemental analyses (3-6 grams dry weight). Elemental analysis samples were placed in Nasco sterile plastic bags (to avoid contamination) and transported back to the BYU Herbarium of Nonvascular Cryptogams. Excess elemental analysis material is permanently stored in Nasco sterile plastic bags in the elemental analysis collection at the BYU Herbarium of Nonvascular Cryptogams. This material is available for additional testing upon request.

#### DETERMINATION OF ELEMENTAL CONCENTRATIONS IN LICHEN TISSUES:

In the laboratory, surface debris and dust were removed from all elemental analysis samples. Clean, 1/2 gram samples of at least one sensitive indicator species from each reference site were delivered to the Elemental Analysis Laboratory at Brigham Young University.

Samples were prepared for PIXE analysis using the methods of Duflou et al. (1987). Lichen samples were placed in Teflon containers with a teflon coated steel ball, cooled to liquid nitrogen temperature, powdered by brittle fracture using a Braun Mikro-Dismemberator II, and then dried in an Imperial IV Microprocessor Oven for 14 hours at 80°C. Subsamples weighing 150 mg were then placed into teflon containers and spiked with 1 ml of a 360 ppm yttrium solution. The samples were then oven dried again for 14 hours at 80°C. Samples were then homogenized again using the micro-dismemberator. Approximately 1 mg of the powdered lichen was then carefully weighed onto a thin polycarbonate film in an area of 0.5 cm<sup>2</sup>. A 1.5% solution of polystyrene in toluene was used to secure the sample to the film.

Samples were analyzed using a 2 MV Van de Graaff accelerator with a 2.28 MeV proton beam which passed through a 1.1 mg/cm<sup>2</sup> pyrolytic graphite diffuser foil. The proton beam was collimated to irradiate an area of 0.38 cm<sup>2</sup> on the sample. Typically, 10-100 nA proton beam currents were used. X-rays were detected using a Tracor X-ray Spectrometer, model TX-3/48-206, with a 10 mm<sup>2</sup> by 3 mm thick Si(Li) detector positioned at 90° to the proton beam. Samples were analyzed twice using different X-ray absorbers between the samples and the detector. One was a 49 mg/cm<sup>2</sup> mylar absorber with a 0.27 mm<sup>2</sup> pinhole (2.8% of detector area). The mylar was backed with an 8.5 mg/cm<sup>2</sup> beryllium foil. A 98 mg/cm<sup>2</sup> mylar absorber was also used.

To insure adequate quality control, samples of NIST SRM 1571 orchard leaves, and other standards were prepared and analyzed using the same procedures.

#### RESULTS, OBSERVATIONS AND RECOMMENDATIONS

#### LICHEN MATERIAL COLLECTED FOR ELEMENTAL ANALYSES:

A total of 32 samples including 10 species and 6 genera from 2 substrates (rock and bark) were collected for elemental analysis. Proton Induced X-ray Emission (PIXE) techniques were used to analyze all samples. Below is a list of the elemental analysis samples by sample number, species, substrate and collection site (the first number represents the storage drawer and the second number represents the specific storage bag). All samples are stored in Nasco sterile plastic bags in the Elemental Analysis Collection at the Herbarium of Nonvascular Cryptogams at Brigham Young University, Provo, Utah.

Sample #	Taxa	Substrate	Reference Site
37-338	Rhizoplaca melanophthalma	rock	1
37-339	Xanthoria elegans	rock	2
37-340	Xanthoria elegans	rock	4
37-341	Xanthoparmelia cumberlandia	rock	4
37-342	Rhizoplaca melanophthalma	rock	4

Sample #	Taxa	Substrate	Reference Site

#### LIST OF POLLUTION SENSITIVE INDICATOR SPECIES BY REFERENCE SITE:

##### vicinity of Buckeye Reservoir:

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Candelariella vitellina* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Melanelia exasperatula* (intermediately sensitive to sulfur dioxide)  
*Melanelia sublivacea* (intermediately sensitive to ozone)  
*Peltigera rufescens* (sensitive to intermediately sensitive to sulfur dioxide)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Usnea hirta* (sensitive to intermediately sensitive to sulfur dioxide and ozone)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

##### mouth of Chris' Canyon:

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Phaeophyscia sciastra* (sensitive to ozone)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Rhizocarpon geographicum* (sensitive to fluoride)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)

*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**Dark Canyon Wilderness Area (Peavine Canyon):**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Collema polycarpon* (sensitive to intermediately sensitive to ozone)  
*Melanelia subolivacea* (intermediately sensitive to ozone)  
*Phaeophyscia sciastra* (sensitive to ozone)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Rhizoplaca chrysolenca* (sensitive to sulfur dioxide)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Duck Lake:**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Caloplaca holocarpa* (intermediately sensitive to sulfur dioxide)  
*Lecanora saligna* (intermediately sensitive to sulfur dioxide)  
*Melanelia subolivacea* (intermediately sensitive to ozone)  
*Peltigera canina* (sensitive to ozone)  
*Peltigera rufescens* (sensitive to intermediately sensitive to sulfur dioxide)  
*Phaeophyscia orbicularis* (intermediately sensitive to sulfur dioxide; sensitive to ozone and fluoride)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Xanthoparmelia cumberlandia* (sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**top of East Mountain:**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Caloplaca holocarpa* (intermediately sensitive to sulfur dioxide)  
*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Lecanora saligna* (intermediately sensitive to sulfur dioxide)  
*Melanelia exasperatula* (intermediately sensitive to sulfur dioxide)  
*Melanelia subolivacea* (intermediately sensitive to ozone)  
*Physcia alpolia* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Geyser Pass:**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Cladonia coniocraea* (intermediately sensitive to sulfur dioxide)  
*Lecanora saligna* (intermediately sensitive to sulfur dioxide)

*Melanelia exasperatula* (intermediately sensitive to sulfur dioxide)  
*Melanelia subolivacea* (intermediately sensitive to sulfur dioxide and ozone)  
*Peltigera aphthosa* (intermediately sensitive to sulfur dioxide)  
*Peltigera canina* (sensitive to ozone)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Rhizocarpon geographicum* (sensitive to fluoride)  
*Usnea subfloridana* (sensitive to intermediately sensitive to sulfur dioxide)  
*Xanthoparmelia cumberlandia* (sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Great Basin Experimental Range Station:**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Caloplaca holocarpa* (intermediately sensitive to sulfur dioxide)  
*Cladonia coniocraea* (intermediately sensitive to sulfur dioxide)  
*Lecanora saligna* (intermediately sensitive to sulfur dioxide)  
*Melanelia subolivacea* (intermediately sensitive to ozone)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Xanthoria candelaria* (sensitive to ozone)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Horseshoe Flat (along Skyline Drive):**

*Candelariella vitellina* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**along Lake Fork Creek:**

*Collema polycarpon* (sensitive to intermediately sensitive to ozone)  
*Melanelia substygia* (intermediately sensitive to ozone)  
*Phaeophyscia nigricans* (intermediately sensitive to sulfur dioxide)  
*Phaeophyscia sciastra* (sensitive to ozone)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Physconia detersa* (intermediately sensitive to sulfur dioxide)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Xanthoria candelaria* (sensitive to ozone)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**junction of La Sal Mountain Loop Road and U.S. Forest Service Road No. 067:**

*Melanelia subolivacea* (intermediately sensitive to sulfur dioxide and ozone)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Rhizoplaca chrysoleuca* (sensitive to sulfur dioxide)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)

*Xanthoparmelia cumberlandia* (sensitive to sulfur dioxide)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Orange-Olsen Guard Station:**

*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Melanelia substygia* (intermediately sensitive to ozone)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Xanthoria candelaria* (sensitive to ozone)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**vicinity of Pine Ridge:**

*Amandinea punctata* (intermediately sensitive to sulfur dioxide)  
*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Lecanora saligna* (intermediately sensitive to sulfur dioxide)  
*Melanelia exasperatula* (intermediately sensitive to sulfur dioxide)  
*Melanelia subolivacea* (intermediately sensitive to ozone)  
*Peltigera rufescens* (sensitive to intermediately sensitive to sulfur dioxide)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Rhizocarpon geographicum* (sensitive to fluoride)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**near Pontown Creek along forest Boundary:**

*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Cladonia fimbriata* (sensitive to intermediately sensitive to sulfur dioxide)  
*Collema polycarpon* (sensitive to intermediately sensitive to ozone)  
*Peltigera rufescens* (sensitive to intermediately sensitive to sulfur dioxide)  
*Physcia adscendens* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Physcia caesia* (intermediately sensitive to sulfur dioxide)  
*Physcia dubia* (sensitive to intermediately sensitive to fluoride)  
*Rhizoplaca melanophthalma* (sensitive to sulfur dioxide)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)  
*Xanthoria fallax* (intermediately sensitive to sulfur dioxide; sensitive to NO<sub>x</sub>/PAN)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**Rilda Canyon:**

*Candelariella vitellina* (intermediately sensitive to sulfur dioxide)  
*Melanelia exasperatula* (intermediately sensitive to sulfur dioxide)  
*Melanelia substygia* (intermediately sensitive to ozone)  
*Physcia stellaris* (intermediately sensitive to sulfur dioxide)  
*Physconia detersa* (intermediately sensitive to sulfur dioxide)  
*Xanthoria candelaria* (sensitive to ozone)  
*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**south of Wales Top:**

*Candelariella vitellina* (intermediately sensitive to sulfur dioxide; sensitive to fluoride)  
*Xanthoria elegans* (intermediately sensitive to sulfur dioxide)

*Xanthoria polycarpa* (intermediately sensitive to sulfur dioxide)

**CHECKLIST OF LICHEN SPECIES FROM SELECTED SITES  
IN THE MANTI LA SAL NATIONAL FOREST, UTAH**

Information for each species includes: Growth form, substrate(s), collection sites, relative abundance, pollution sensitivity (if known), and location of herbarium specimens. The scale of relative abundance is rare<common<abundant. Assignment of relative abundance categories is based on the following criteria: rare = 1-2 encounters, common = 3-9 encounters, and abundant  $\geq$  10 encounters.

**Acarospora bullata Anzi**

Growth form: crustose-squamulose  
Substrate: rock  
Site(s): near junction of U.S. Forest Service roads 067 and 062  
Relative abundance: rare to locally common  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C32814

**Acarospora badiofuscata (Nyl.) Th. Fr.**

Growth form: crustose  
Substrate: rock  
Site(s): vicinity of Duck Lake  
Relative abundance: rare  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C34460

**Acarospora fuscata (Schrader) Arnold**

Growth form: crustose  
Substrate: rock  
Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), South of Wales Top, near junction of U.S. Forest Service roads 067 and 062, Dark Canyon Wilderness Area (Peavine Canyon)  
Relative abundance: common  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-26967, BRY C-27077, BRY C-27095, BRY C-27116, BRY C-31927, BRY C-31945, BRY C-31960, BRY C-32798, BRY C-34524

**Acarospora stapfiana (Müll. Arg.) Hue**

Growth form: crustose  
Substrate: rock, often growing over Caloplaca trachyphylla  
Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -ephemeral drainage, South of Wales Top, near junction of U.S. Forest Service roads 067 and 062, Dark Canyon Wilderness Area (Peavine Canyon)  
Relative abundance: locally common  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-26971, BRY C-27033, BRY C-31951, BRY C-32826, BRY C-34534

*Acarospora strigata* (Nyl.) Jatta

Growth form: crustose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, South of Wales Top, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26975, BRY C-27021, BRY C-27084, BRY C-31932, BRY C-31935, BRY C-34518

*Amandinea punctata* (Hoffm.) Coppins ex Scheid.

Growth form: crustose

Substrate: bark, lignum

Site(s): mouth of Chris' Canyon, vicinity of Great Basin Experimental Range Station, top of East Mountain, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32014, BRY C-32022, BRY C-31907, BRY C-32123, BRY C-32132, BRY C-32133, BRY C-32767, BRY C-32750, BRY C-32693, BRY C-34497, BRY C-34815

*Aspicilia cinerea* (L.) Körber

Growth form: crustose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27117, BRY C-27143, BRY C-31974b, BRY C-32771

*Aspicilia desertorum* (Kremp.) Mereschk.

Growth form: crustose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, Horseshoe Flat (along Skyline Drive), near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26950, BRY C-27126, BRY C-27140, BRY C-31985, BRY C-32799, BRY C-32711, BRY C-32651, BRY C-34447

*Buellia disciformis* (Fr.) Mudd

Growth form: crustose (scant)  
Substrate: lignum  
Site(s): vicinity of Pine Ridge  
Relative abundance: rare  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-32690

*Buellia erubescens* Arnold

Growth form: crustose  
Substrate: bark  
Site(s): vicinity of Duck Lake  
Relative abundance: rare  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-34594

*Caloplaca arizonica* H. Magn.

Growth form: crustose  
Substrate: lignum, bark  
Site(s): top of East Mountain, Dark Canyon Wilderness Area (Peavine Canyon)  
Relative abundance: common  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-32113, BRY C-32124, BRY C-32140, BRY C-34818

*Caloplaca atralba* (Tuck.) Zahlbr.

Growth form: crustose (scant)  
Substrate: rock  
Site(s): vicinity of Buckeye Reservoir  
Relative abundance: rare  
Pollution sensitivity: unknown  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-32735

*Caloplaca cerina* (Hedwig) Th. Fr.

Growth form: crustose (scant)  
Substrate: bark  
Site(s): vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)  
Relative abundance: rare to locally common  
Pollution sensitivity:  
Comments: none  
Deposition of specimens: BYU Herbarium: BRY C-34500b, BRY C-34823b

*Caloplaca cladodes* (Tuck.) Zahlbr.

Growth form: minutely fruticose

Substrate: soil over rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, vicinity of Pine Ridge

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27028, BRY C-32695

*Caloplaca decipiens* (Arnold) Blomb. & Forss.

Growth form: crustose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26972, BRY C-27139

*Caloplaca durietzii* H. Magn.

Growth form: crustose

Substrate: bark, lignum

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, top of East Mountain, vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27027, BRY C-32111, BRY C-34500a

*Caloplaca epithallina* Lynge

Growth form: crustose (scant to absent)

Substrate: over thalli of crustose lichens, rock

Site(s): near junction of U.S. Forest Service roads 067 and 062, vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32835, BRY C-34455

*Caloplaca flavovirescens* (Wulff) Dalla Torre & Samth.

Growth form: crustose

Substrate: rock

Site(s): vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34493

*Caloplaca fraudans* (Th. Fr.) H. Olivier

Growth form: crustose (absent)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, South of Wales Top, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, near junction of U.S. Forest Service roads 067 and 062, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26943, BRY C-27003, BRY C-27074, BRY C-27080, BRY C-31931, BRY C-32762, BRY C-32710, BRY C-32829, BRY C-32663, BRY C-34456

*Caloplaca holocarpa* (Hoffm. ex Ach.) M. Wade

Growth form: crustose

Substrate: lignum, bark

Site(s): vicinity of Great Basin Experimental Range Station, top of East Mountain, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Wetmore 1987)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31913, BRY C-32139, BRY C-34604

*Caloplaca modesta* (Zahlbr.) Fink

Growth form: crustose

Substrate: rock

Site(s): South of Wales Top

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31946

*Caloplaca saxicola* (Hoffm.) Nordin

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31987

*Caloplaca trachyphylla* (Tuck.) Zahlbr.

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, South of Wales Top, Horseshoe Flat (along Skyline Drive), near junction of U.S. Forest Service roads 067 and 062, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26970, BRY C-26991, BRY C-26995, BRY C-27015, BRY C-27076, BRY C-27082, BRY C-31926, BRY C-32805, BRY C-34506

*Candelariella aurella* (Hoffm.) Zahlbr.

Growth form: crustose

Substrate: rock, soil over rock

Site(s): near junction of U.S. Forest Service roads 067 and 062, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32824, BRY C-34451, BRY C-34530

*Candelariella deflexa* (Nyl.) Zahlbr.

Growth form: crustose (absent)

Substrate: lignum, bark

Site(s): Orange-Olsen Guard Station, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27055, BRY C-34583, BRY C-34813

*Candelariella rosulans* (Müll. Arg.) Zahlbr.

Growth form: crustose

Substrate: over moss, rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, vicinity of Pine Ridge

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26986, BRY C-27089, BRY C-27115, BRY C-31994b, BRY C-32001, BRY C-32800, BRY C-32654

*Candelariella subdeflexa* (Nyl.) Lettau

Growth form: crustose

Substrate: lignum

Site(s): vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34480

*Candelariella vitellina* (Hoffm.) Müll. Arg.

Growth form: crustose

Substrate: moss, rock, soil over rock, lignum, bark

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, South of Wales Top, top of East Mountain, Horseshoe Flat (along Skyline Drive), vicinity of Buckeye Reservoir, vicinity of Pine Ridge, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide; sensitive to fluoride (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26941, BRY C-26997, BRY C-27032, BRY C-27073, BRY C-27083, BRY C-31956, BRY C-32105, BRY C-32112, BRY C-32146, BRY C-32707, BRY C-32689, BRY C-34832

*Catapyrenium compactum* (Massal.) R. Sant.

Growth form: squamulose

Substrate: rock

Site(s): top of East Mountain

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32108

*Catapyrenium tuckermanii* (Rav. ex Mont.) Thomson

Growth form: squamulose

Substrate: lignum

Site(s): Orange-Olsen Guard Station

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27053

*Catapyrenium zahlbrückneri* (Hasse) Thomson

Growth form: squamulose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26965, BRY C-26998, BRY C-27002  
BRY C-27071

*Cladonia cariosa* (Ach.) Sprengel

Growth form: squamulose (with podetia)

Substrate: soil

Site(s): vicinity of Geyser Pass, vicinity of Buckeye Reservoir

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32774, BRY C-32771

*Cladonia coniocraea* (Flörke) Sprengel

Growth form: squamulose (with podetia)

Substrate: decomposing wood

Site(s): vicinity of Great Basin Experimental Range Station, vicinity of Geyser Pass

Relative abundance: rare to locally common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31924, BRY C-32769

*Cladonia fimbriata* (L.) Fr.

Growth form: squamulose (with podetia)

Substrate: decomposing wood

Site(s): along USFS road #122 and Pontown Creek near forest boundary

Relative abundance: common

Pollution sensitivity: sensitive to intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26985

*Cladonia pyxidata* (L.) Hoffm.

Growth form: squamulose (with podetia)

Substrate: decomposing wood

Site(s): vicinity of Geyser Pass, vicinity of Buckeye Reservoir

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32778, BRY C-32725

*Cladonia sulphurina* (Michaux) Fr.

Growth form: squamulose (with podetia)

Substrate: decomposing wood

Site(s): vicinity of Geyser Pass

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32793

*Collema cristatum* (L.) F.H. Wigg.

Growth form: foliose

Substrate: rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, along USFS road #070 (Lake Fork Creek)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26992, BRY C-27128

*Collema polycarpon* Hoffm.

Growth form: foliose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: sensitive to intermediately sensitive to ozone (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26976, BRY C-27130, BRY C-34542

*Collema tenax* (Sw.) Ach.

Growth form: crustose

Substrate: soil

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27018

*Dermatocarpon intestiniforme* (Körber) Hasse

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): mouth of Chris' Canyon, vicinity of Pine Ridge

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31992, BRY C-32658a

*Dermatocarpon miniatum* (L.) W. Mann

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): vicinity of Buckeye Reservoir, vicinity of Pine Ridge, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32742, BRY C-32658b, BRY C-34525

*Dermatocarpon reticulatum* H. Magn.

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon

Relative abundance: abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26974, BRY C-27016, BRY C-27029, BRY C-27136, BRY C-27179, BRY C-31970, BRY C-31991

*Dimelaena oreina* (Ach.) Norman

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062,  
Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32007, BRY C-32811, BRY C-34522

*Diploschistes actinostomus* (Ach.) Zahlbr.

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31990

*Diploschistes scruposus* (Schreber) Norman

Growth form: crustose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27149

*Endocarpon pusillum* Hedwig

Growth form: crustose

Substrate: rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -ephemeral drainage

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27040

*Evernia divaricata* (L.) Ach.

Growth form: fruticose

Substrate: bark

Site(s): vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge

Relative abundance: locally common to abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32780, BRY C-32746, BRY C-32682

*Fulglesia bracteata* (Hoffm.) Räsänen

Growth form: squamulose

Substrate: soil

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34552

*Heteroplacodium acarosporoides* (Zahlbr.) Breuss

Growth form: crustose

Substrate: rock

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34516

*Lecanora argopholis* (Ach.) Ach.

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, vicinity of Duck Lake

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31989, BRY C-32807, BRY C-32740, BRY C-34457

*Lecanora bicingula* Ramond

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32011

*Lecanora cenisia* Ach.

Growth form: crustose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek), vicinity of Buckeye Reservoir

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27113, BRY C-32714

*Lecanora crenulata* Hook.

Growth form: crustose (scant)

Substrate: rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, South of Wales Top, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27024, BRY C-27081, BRY C-31929, BRY C-31930, BRY C-34509

*Lecanora dispersa* (Pers.) Sommerf.

Growth form: crustose (often lacking)

Substrate: rock

Site(s): top of East Mountain

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32141

*Lecanora garovagliai* (Körber) Zahlbr.

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): mouth of Chris' Canyon, South of Wales Top, near junction of U.S. Forest Service roads 067 and 062, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31997, BRY C-32000, BRY C-31936, BRY C-32825, BRY C-34464, BRY C-34514

*Lecanora hagenii* (Ach.) Ach.

Growth form: crustose (scant)

Substrate: lignum, bark

Site(s): Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, vicinity of Great Basin Experimental Range Station, top of East Mountain, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27058, BRY C-27170, BRY C-31893b, BRY C-31903, BRY C-31912, BRY C-32110, BRY C-32145, BRY C-34577, BRY C-34814

*Lecanora mughicola* Nyl.

Growth form: crustose (scant)

Substrate: lignum

Site(s): vicinity of Pine Ridge

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32692

*Lecanora muralis* (Schreber) Rabenh.

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, Pine Ridge, near junction of U.S. Forest Service roads 067 and 062, vicinity of Duck Lake, Dark Canyon Wilderness Area

Relative abundance: abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26952, BRY C-27114, BRY C-27123, BRY C-31982, BRY C-32655, BRY C-32802, BRY C-34445, BRY C-34547

*Lecanora novomexicana* H. Magn.

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, vicinity of Geyser Pass, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32004, BRY C-32834, BRY C-32755, BRY C-34491, BRY C-34521

*Lecanora phaedrophthalma* Poelt

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen Guard Station, vicinity of Pine Ridge

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26956, BRY C-27090, BRY C-32655

*Lecanora piniperda* Körber

Growth form: crustose

Substrate: bark

Site(s): top of East Mountain

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32128

*Lecanora polytrapa* (Hoffm.) Rabenh.

Growth form: crustose (scant)

Substrate: rock

Site(s): vicinity of Great Basin Experimental Range Station, vicinity of Geyser Pass, vicinity of Buckeye Reservoir

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31917, BRY C-32764, BRY C-32709

*Lecanora rupicola* (L.) Zahlbr.

Growth form: crustose

Substrate: rock

Site(s): vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32772

*Lecanora saligna* (Schrader) Zahlbr.

Growth form: crustose (scant)

Substrate: bark, lignum

Site(s): vicinity of Great Basin Experimental Range Station, top of East Mountain, vicinity of Geyser Pass, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Wetmore 1987)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31918, BRY C-32129, BRY C-32768, BRY C-32691, BRY C-34481

*Lecanora valesiaca* (Müll. Arg.) Stizenb.

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34539

*Lecanora varia* (Hoffm.) Ach.

Growth form: crustose (scant)

Substrate: lignum, bark

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, mouth of Chris' Canyon, vicinity of Geyser Pass, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27010, BRY C-27063, BRY C-32015, BRY C-32766, BRY C-34585

*Lecidea atrobrunnea* (Ramond ex Lam. & DC.) Schaefer

Growth form: crustose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, Pine Ridge, near junction of U.S. Forest Service roads 067 and 062, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: locally abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26946, BRY C-27121, BRY C-31986, BRY C-32005, BRY C-32652, BRY C-32803, BRY C-32770, BRY C-32715, BRY C-32652, BRY C-34446

*Lecidea leucothallina* Arnold

Growth form: crustose

Substrate: rock

Site(s): vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34467

*Lecidea plana* (J. Lahm) Nyl.

Growth form: crustose (scant)

Substrate: rock

Site(s): vicinity of Pine Ridge

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32696

*Lecidea tessellata* Flörke

Growth form: crustose (well developed to scant)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, South of Wales Top, Horseshoe Flat (along Skyline Drive), near junction of U.S. Forest Service roads 067 and 062, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26969, BRY C-27092, BRY C-27122, BRY C-27145, BRY C-31995, BRY C-31947, BRY C-32809, BRY C-32756, BRY C-32712, BRY C-32661a, BRY C-34448, BRY C-34504

*Lecidella carpathica* Körber

Growth form: crustose

Substrate: rock

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32727

*Lecidella euphorea* (Flörke) Hertel

Growth form: crustose

Substrate: lignum

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27026, BRY C-34476

*Lecidella stigmataea* (Ach.) Hertel & Leuckert

Growth form: crustose

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, mouth of Chris' Canyon, vicinity of Geyser Pass, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26942, BRY C-31981, BRY C-31993, BRY C-32002, BRY C-32757, BRY C-32661b, BRY C-34449

*Leptogium gelatinosum* (With.) J.R. Laundon

Growth form: foliose

Substrate: moss over rock

Site(s): along USFS road #070 (Lake Fork Creek)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27157

*Lobothallia alphoplaca* (Wahlenb.) Hafellner

Growth form: crustose (with effigurate margins)

Substrate: rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062

Relative abundance: common to locally abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27023, BRY C-27112, BRY C-27118, BRY C-31999, BRY C-32830

*Megaspora verrucosa* (Ach.) Hafellner & V. Wirth

Growth form: crustose

Substrate: bark

Site(s): top of East Mountain

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32137

*Melanelia elegantula* (Zahlbr.) Essl.

Growth form: foliose

Substrate: moss over rock, bark, rock, lignum

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen  
Guard Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, vicinity  
of Great Basin Experimental Range Station, South of Wales Top, top of East Mountain,  
vicinity of Buckeye Reservoir, vicinity of Duck Lake

Relative abundance: common to locally abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26983, BRY C-27065, BRY C-27155,  
BRY C-27161, BRY C-27174, BRY C-31968, BRY C-31996, BRY C-32013, BRY C-  
32016, BRY C-31895, BRY C-31911a, BRY C-31911b, BRY C-31919, BRY C-31942,  
BRY C-32130, BRY C-32134, BRY C-32747, BRY C-34574

*Melanelia exasperatula* (Nyl.) Essl.

Growth form: foliose

Substrate: bark

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, top of East  
Mountain, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27009, BRY C-32136, BRY C-32783,  
BRY C-32744, BRY C-32705

*Melanelia subolivacea* (Nyl.) Essl.

Growth form: foliose

Substrate: bark

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen  
Guard Station, along USFS road #070 (Lake Fork Creek), vicinity of Great Basin  
Experimental Range Station, top of East Mountain, near junction of U.S. Forest Service  
roads 067 and 062, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine  
Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common to locally abundant

Pollution sensitivity: intermediately sensitive to sulfur dioxide and ozone (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27042, BRY C-27060, BRY C-27173,  
BRY C-31897, BRY C-32126, BRY C-32135, BRY C-32815, BRY C-32782, BRY C-  
32745, BRY C-32665, BRY C-34575, BRY C-34822

*Melanelia tominii* (Oksner) Essl.

Growth form: foliose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek), Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27147, BRY C-27151, BRY C-34550

*Mycobilimbia berengeriana* (Massal.) Hafellner & V. Wirth

Growth form: crustose

Substrate: soil

Site(s): vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32794

*Peltigera aphthosa* (L.) Willd.

Growth form: foliose

Substrate: soil

Site(s): vicinity of Geyser Pass

Relative abundance: locally common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32791

*Peltigera canina* (L.) Willd.

Growth form: foliose

Substrate: soil

Site(s): vicinity of Geyser Pass, vicinity of Duck Lake

Relative abundance: locally common

Pollution sensitivity: sensitive to ozone

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32775, BRY C-34471

*Peltigera rufescens* (Weiss) Humb.

Growth form: foliose

Substrate: soil

Site(s): along USFS road #122 and Pontown Creek near forest boundary, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: sensitive to intermediately sensitive to sulfur dioxide

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26984, BRY C-32722, BRY C-32659, BRY C-34462

*Peltigera venosa* (L.) Hoffm.

Growth form: foliose

Substrate: soil

Site(s): vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32795

*Phacophyscia cernohorskij* (Nádv.) Essl.

Growth form: foliose

Substrate: bark

Site(s): vicinity of Duck Lake

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34606

*Phaeophyscia decolor* (Kashiw.) Essl.

Growth form: foliose

Substrate: moss over rock

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32738

*Phaeophyscia endococcina* (Körber) Moberg

Growth form: foliose

Substrate: moss over rock

Site(s): along USFS road #070 (Lake Fork Creek)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27150, BRY C-27152

*Phaeophyscia nigricans* (Flörke) Moberg

Growth form: foliose

Substrate: bark

Site(s): along USFS road #070 (Lake Fork Creek)

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Wetmore 1987)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27165, BRY C-27166

*Phaeophyscia orbicularis* (Necker) Moberg

Growth form: foliose

Substrate: bark

Site(s): vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: intermediately sensitive to sulfur dioxide, sensitive to ozone and fluoride (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-34501

*Phaeophyscia sciastra* (Ach.) Moberg

Growth form: foliose

Substrate: moss over rock, rock

Site(s): along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, Dark Canyon  
Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: sensitive to ozone (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27103, BRY C-27108, BRY C-27148,  
BRY C-27163, BRY C-31975, BRY C-34533

*Physcia adscendens* (Fr.) H. Olivier

Growth form: foliose

Substrate: bark

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen Guard  
Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, vicinity of  
Great Basin Experimental Range Station, Horseshoe Flat (along Skyline Drive), vicinity of  
Geyser Pass, vicinity of Duck Lake

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide; sensitive to fluoride (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26979, BRY C-26982, BRY C-27057,  
BRY C-27062, BRY C-27164, BRY C-27168, BRY C-31894, BRY C-31901, BRY C-  
31910, BRY C-32784, BRY C-34580

*Physcia aipolia* (Ehrh. ex Humb.) Fürnr.

Growth form: foliose

Substrate: lignum

Site(s): top of East Mountain

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide; sensitive to fluoride (Ryan  
1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32115

*Physcia biziana* (Massal.) Zahlbr.

Growth form: foliose

Substrate: rock

Site(s): mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31973

*Physcia caesia* (Hoffm.) Fürnr.

Growth form: foliose

Substrate: moss over rock, rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, vicinity of Great Basin Experimental Range Station, vicinity of Geyser Pass, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26949, BRY C-27099, BRY C-27131, BRY C-31965, BRY C-31976, BRY C-31925, BRY C-32760, BRY C-32736, BRY C-32660, BRY C-34496, BRY C-34519

*Physcia dubia* (Hoffm.) Lettau

Growth form: foliose

Substrate: rock, bark, lignum

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, top of East Mountain, Pine Ridge, vicinity of Geyser Pass, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: sensitive to intermediately sensitive to fluoride (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26977, BRY C-27110, BRY C-27158, BRY C-27177, BRY C-27178, BRY C-31983, BRY C-32020, BRY C-32021, BRY C-32143a, BRY C-32657, BRY C-32765, BRY C-32657, BRY C-34450, BRY C-34816a

*Physcia magnussonii* Frey

Growth form: foliose

Substrate: rock

Site(s): near junction of U.S. Forest Service roads 067 and 062

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32812

*Physcia stellaris* (L.) Nyl.

Growth form: foliose

Substrate: bark, lignum

Site(s): Rilda Canyon along Rilda Creek (left fork) -ephemeral drainage, Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), vicinity of Great Basin Experimental Station, top of East Mountain, near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Wetmore 1987)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27035, BRY C-27061, BRY C-27172, BRY C-31898, BRY C-32119, BRY C-32127, BRY C-32136a, BRY C-32817, BRY C-32751, BRY C-32668, BRY C-34499, BRY C-34816b

*Physciella chloantha* (Ach.) Essl.

Growth form: foliose

Substrate: bark

Site(s): top of East Mountain, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32121, BRY C-34820

*Physconia detersa* (Nyl.) Poelt

Growth form: foliose

Substrate: moss over bark, rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, along USFS road #070 (Lake Fork Creek)

Relative abundance: rare

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Wetmore 1987)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27037, BRY C-27102, BRY C-27142, BRY C-27154

*Physconia enteroxantha* (Nyl.) Poelt

Growth form: foliose

Substrate: moss, soil over rock, rock

Site(s): along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27109, BRY C-27141, BRY C-31971

*Physconia isidiigera* (Zahlbr.) Essl.

Growth form: foliose

Substrate: moss over rock

Site(s): mouth of Chris' Canyon

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31978

*Placidium squamulosum*

Growth form: squamulose

Substrate: soil, soil over rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27019, BRY C-32729, BRY C-32698, BRY C-34463, BRY C-34531

*Protoparmelia badia* (Hoffm.) Hafellner

Growth form: crustose

Substrate: rock

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32718

*Psora cerebriformis* W.A. Weber

Growth form: squamulose

Substrate: soil

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C- 34548

*Psora decipiens* (Hedwig) Hoffm.

Growth form: squamulose

Substrate: soil over rock

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C- 34543

*Psora globifera* (Ach.) A. Massal.

Growth form: squamulose

Substrate: on soil over rock

Site(s): vicinity of Buckeye Reservoir, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C- 32730, BRY C-34528

*Psora luridella* (Tuck.) Fink

Growth form: squamulose

Substrate: on soil over rock

Site(s): mouth of Chris' Canyon, vicinity of Duck Lake

Relative abundance: rare

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C- 31984, BRY C-34472

*Psora nipponica* (Zahlbr.) Gotth.

Growth form: squamulose

Substrate: on soil/moss over rock

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C- 32737

*Psora tuckermanii* R. Anderson ex Timdal

Growth form: squamulose

Substrate: soil over rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage, Orange-Olsen Guard Station, along USFS road #070 (Lake Fork Creek), top of East Mountain, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common to abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26963, BRY C-26987, BRY C-27031, BRY C-27068, BRY C-27100, BRY C-27107, BRY C-32104, BRY C-34511

*Psoroma hypnorum* (Vahl) Gray

Growth form: squamulose

Substrate: soil

Site(s): vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32776

*Pyrthospora elabens* (Fr.) Hafellner

Growth form: crustose

Substrate: bark

Site(s): top of East Mountain

Relative abundance: rare

Pollution sensitivity: unknown

Comments: This is new species record for the state of Utah

Deposition of specimens: BYU Herbarium: BRY C-32138

*Ramalina sinensis* Jatta

Growth form: fruticose

Substrate: bark

Site(s): vicinity of Geyser Pass, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32779, BRY C-32664, BRY C-34498, BRY C-34825

*Rhizocarpon disporum* (Nägeli ex Hepp) Müll. Arg.

Growth form: crustose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27133, BRY C-27144, BRY C-27146, BRY C-31974a, BRY C-31988, BRY C-32012, BRY C-32806, BRY C-32732, BRY C-34545

*Rhizocarpon geographicum* (L.) DC.

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon, vicinity of Geyser Pass, vicinity of Pine Ridge

Relative abundance: common

Pollution sensitivity: sensitive to fluoride (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31998, BRY C-32010, BRY C-32759, BRY C-32662

*Rhizocarpon superficiale* (Schaerer) Vainio

Growth form: crustose

Substrate: rock

Site(s): vicinity of Geyser Pass

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32773

*Rhizoplaca chrysoleuca* (Sm.) Zopf

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): near junction of U.S. Forest Service roads 067 and 062, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32838, BRY C-34520

*Rhizoplaca melanophthalma* (DC.) Leuckert & Poelt

Growth form: foliose (umbilicate)

Substrate: rock, lignum

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common to abundant

Pollution sensitivity: sensitive to sulfur dioxide (Ryan 1990)

Comments: lignum is an unusual substrate for this species

Deposition of specimens: BYU Herbarium: BRY C-26947, BRY C-27106, BRY C-31967, BRY C-32797, BRY C-32731b, BRY C-32686, BRY C-34469, BRY C-34505

*Rhizoplaca peltata* (Ramond) Leuckert & Poelt

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, near junction of U.S. Forest Service roads 067 and 062, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common to abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26953, BRY C-27119, BRY C-31969, BRY C-32832, BRY C-34512

*Rinodina castanomela* (Nyl.) Arnold

Growth form: crustose

Substrate: rock

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C-34527

*Sarcogyne dakotensis* H. Magn.

Growth form: crustose

Substrate: rock

Site(s): top of East Mountain

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32102

*Sarcogyne regularis* Körber

Growth form: crustose (scant)

Substrate: rock

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32720

*Squamaria lentigera* (Weber) Poelt

Growth form: squamulose

Substrate: soil

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C-34551

*Staurothele areolata* (Ach.) Lettau

Growth form: crustose

Substrate: rock

Site(s): mouth of Chris' Canyon, vicinity of Great Basin Experimental Range Station, near junction of U.S. Forest Service roads 067 and 062, vicinity of Buckeye Reservoir, vicinity of Pine Ridge, vicinity of Duck Lake, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

*Staurothele drummondii* (Tuck.) Tuck.

Growth form: crustose

Substrate: rock

Site(s): Orange-Olsen Guard Station, vicinity of Great Basin Experimental Range Station, South of Wales Top, top of East Mountain, Horseshoe Flat (along Skyline Drive), near junction of U.S. Forest Service roads 067 and 062

Relative abundance: locally common to abundant

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27067, BRY C-31905, BRY C-31958, BRY C-31963, BRY C-32143b, BRY C-32804

*Staurothele elenkinii* Oksner

Growth form: crustose (scant)

Substrate: rock

Site(s): South of Wales Top, Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimen: BYU Herbarium: BRY C-31928, BRY C-34510

*Tephromela atra* (Hudson) Hafellner

Growth form: crustose

Substrate: lignum

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27025

*Toninia candida* (Weber) Th. Fr.

Growth form: squamulose

Substrate: soil over rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27001

*Toninia sedifolia* (Scop.) Timdal

Growth form: squamulose

Substrate: soil

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: rare to locally common

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C-34532

*Toninia tristis* (Th. Fr.) Th. Fr.

Growth form: squamulose

Substrate: soil over rock

Site(s): Rilda Canyon along Rilda Creek (left fork) -emphemeral drainage

Relative abundance: rare

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-26988

*Umbilicaria virginis* Schaefer

Growth form: foliose (umbilicate)

Substrate: rock

Site(s): mouth of Chris' Canyon

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-31966

*Usnea hirta* (L.) F.H. Wigg.

Growth form: fruticose

Substrate: bark

Site(s): vicinity of Buckeye Reservoir

Relative abundance: rare to locally common

Pollution sensitivity: sensitive to intermediately sensitive to sulfur dioxide and ozone (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32743

*Usnea subfloridana* Stirton

Growth form: fruticose

Substrate: bark

Site(s): vicinity of Geyser Pass

Relative abundance: rare to locally common

Pollution sensitivity: sensitive to intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32781

*Xanthopannaria coloradoensis* (Gyelnik) Hale

Growth form: foliose

Substrate: rock

Site(s): mouth of Chris' Canyon, vicinity of Buckeye Reservoir

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32003, BRY C-32731a

*Xanthoparmelia cumberlandia* (Gyelnik) Hale

Growth form: foliose

Substrate: rock

Site(s): near junction of U.S. Forest Service roads 067 and 062, vicinity of Geyser Pass, vicinity of Duck Lake

Relative abundance: locally common

Pollution sensitivity: sensitive to sulfur dioxide (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-32808, BRY C-32758, BRY C-34495

*Xanthoparmelia mexicana* (Gyelnik) Hale

Growth form: foliose

Substrate: rock

Site(s): Dark Canyon Wilderness Area (Peavine Canyon)

Relative abundance: locally common

Pollution sensitivity: unknown

Deposition of specimens: BYU Herbarium: BRY C-34553

*Xanthoparmelia plittii* (Gyelnik) Hale

Growth form: foliose

Substrate: rock

Site(s): along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27111, BRY C-27151, BRY C-32009

*Xanthoria candelaria* (L.) Th. Fr.

Growth form: foliose

Substrate: bark, lignum

Site(s): Rilda Canyon along Rilda Creek (left fork) -ephemeral drainage, Orange-Olsen

Guard Station, along USFS road #070 (Lake Fork Creek), vicinity of Great Basin

Experimental Range Station

Relative abundance: rare

Pollution sensitivity: sensitive to ozone (Ryan 1990)

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27044, BRY C-27051, BRY C-27159, BRY C-27176a, BRY C-32017, BRY C-31909

*Xanthoria elegans* (Link) Th. Fr.

Growth form: foliose

Substrate: rock, lignum, moss over rock

Site(s): along USFS road #122 and Pontown Creek near forest boundary, Orange-Olsen  
Guard Station, along USFS road #070 (Lake Fork Creek), mouth of Chris' Canyon, South  
of Wales Top, top of East Mountain, Horseshoe Flat (along Skyline Drive), near junction of  
U.S. Forest Service roads 067 and 062, vicinity of Pine Ridge, Dark Canyon Wilderness  
Area (Peavine Canyon)

Relative abundance: locally common to abundant

Pollution sensitivity: intermediately sensitive to sulfur dioxide (Ryan 1990)

Comments: lignum is an unusual substrate for this species

*Xylographa parallela* (Ach. Fr.) Behlen & Desberg

Growth form: crustose (endoxylic)

Substrate: lignum

Site(s): Orange-Olsen Guard Station

Relative abundance: common

Pollution sensitivity: unknown

Comments: none

Deposition of specimens: BYU Herbarium: BRY C-27050

## OBSERVATIONS AND CONCLUSIONS:

1. Lichen species collected at selected reference sites in the Manti-La Sal National Forest make up a diverse and well developed flora. From our collections at the 15 air quality biomonitoring reference sites we have identified a total of 143 species in 48 genera. All growth forms are represented; however the flora is dominated by crustose species (51%, 73 species), followed by foliose species (31%, 45 species). Squamulose lichens make up 15% of the flora (21 species); while fruticose species comprise only 3% of the flora with 5 species. This growth form pattern is typical of other Intermountain Area lichen floras which are characteristically dominated by crustose species (e.g. 48% in the Bridger Wilderness Area, and 50% in the High Uintas Wilderness Area; with foliose species representing 28% and 29% of the lichen flora in those wilderness areas). A similar study conducted at several sites along the Wasatch Front yielded an even higher percentage of crustose species (60%, 91 out of 155 species). The abundance of crustose species along the Wasatch Front (a growth form generally thought to be more tolerant of air pollution) suggests that other more sensitive growth forms (especially fruticose and foliose species) may have over time been reduced in numbers due to declining air quality. The proximity of some of the Manti-La Sal National Forest reference sites to the Wasatch Front suggests the need for careful monitoring of sensitive indicator species and growth form distribution patterns.
2. Lichen specimens were collected from 5 basic substrates: rocks, lignum/bark, moss/detritus, soil, and other lichens. A total of 82 species (57% of the flora) were collected from various rock substrates. Species on bark and lignum substrates were next in abundance, totaling 40 species (28% of the flora). One species (1% of the flora) was collected from moss and detritus substrates, while 19 species (13% of the flora) were collected from soil substrates. Finally, 2 species (1%) occurred on other lichens. Intermountain Area lichen floras are typically dominated by rock species. For example, 37% (67 species) of the lichen flora from the High Uintas Wilderness Area (northeastern Utah) are from rock substrates with only 23% (41 species) from corticolous (bark and lignum) substrates. The Bridger Wilderness Area, in western Wyoming, shows a similar pattern with 51% (76 species) reported from rock substrates and 23% (35 species) from bark and lignum.
3. Total species diversity (143 species in 48 genera) suggests that overall the lichen communities in the Manti-La Sal National Forest have not been heavily impacted by air pollution. Furthermore, the relatively high average number of sensitive indicator species per reference site (10.1 species) also suggests little or no air pollution-related impact in the Manti-La Sal National Forest. This compares to 10.3 for the High Uintas Wilderness area, 8.0 for the Bridger Wilderness area, and 6.3 for sites along the Wasatch Front. However, there are some discrepancies in the average number of sensitive indicator species per reference site between the Monticello-Moab districts (11.8) and the Price, San Pete, and Ferron districts (8.9). This difference might be related, at least in part, to the general proximity of the Price, San Pete, and Ferron sites to the air pollution problems of the Wasatch Front.
4. Necrotic and/or bleached thalli (typical signs of air pollution-related impact) were generally absent.
5. Baseline concentrations of potential pollutant elements were determined by analyzing the tissues of at least one sensitive indicator species from each reference site (Table 1). Pollutant element concentrations in several samples exceeded background levels (Figure 2). For example, four samples (339, 494, 533, and 547) showed elevated levels of sulfur (0.196-0.27%). It is generally thought that sulfur concentrations in lichen thalli of .2% or higher indicate significant sulfur accumulation, which may interfere with sensitive metabolic activities such as photosynthesis, cellular respiration and nitrogen fixation. One sample,

**Fig. 2 cont.: Lichen Biomonitoring Program and Baseline**

from Rilda Canyon in Emery County (339), was collected near one of the exhaust fans of the Deer Creek coal mine. The other three samples (494, 533, and 547), all from southeastern Utah in the Monticello District, may be accumulating fallout from sulfur-rich emissions generated by local coal-fired power plants. Across almost all reference sites (28/33) thallus concentrations of arsenic (2.2 ppm to 19.1 ppm) were moderately elevated to elevated and certainly on the average exceeded values reported for most other Intermountain Area reference sites. Overall, nickel concentrations (4.08 ppm to 13.6 ppm) were higher than values reported for most other locations in the Rocky Mountain Region; however, they are still within background levels. Chromium concentrations were elevated in three samples (448, 450, and 451), ranging from 23.4 ppm to 25.9 ppm. Lead concentrations are generally well within background levels; however, four samples (445, 448, 449, and 450) were somewhat elevated (52.9-78.7 ppm), especially when compared with most other Rocky Mountain reference sites. Copper/zinc ratios were well within background levels ( $\leq 0.5$ ) at all sites (0.054 - 0.39). However, Fe/Ti ratios were slightly elevated in four samples (343, 447, 491, and 492), moderately elevated in 3 samples (339, 340, and 453); and elevated in one sample (450), ranging between 8.46 and 11.07 with background levels generally falling between 6 and 8. Elemental analysis data suggest three general areas of concern: 1) Rilda Canyon in Carbon County with elevated sulfur and a moderately elevated Fe/Ti ratio; 2) Pine Ridge, Elk Ridge, and Dark Canyon in San Juan County with elevated sulfur; 3) Chris' Canyon, Great Basin Experiment Station, South of Wales Top, and Orange-Olsen Guard Station in San Pete County with some combination of elevated heavy metals including lead, chromium, and arsenic; as well as elevated Fe/Ti ratios. Overall, this pattern of pollutant element accumulation in lichen tissues is remarkably similar to data collected at air quality biomonitoring reference sites established in the Uinta National Forest along the heavily populated and industrialized Wasatch Front. It appears that at least some of the reference sites in the Manti-La Sal National Forest may be experiencing some air pollution-related impact, with reference sites in the San Pete, Ferron, and Price ranger districts demonstrating accumulation of selected heavy metals and at least somewhat elevated Fe/Ti ratios. While reference sites in the Monticello District showing elevated sulfur concentrations.

#### **RECOMMENDATIONS:**

1. Usually, review of pollutant concentrations in sensitive indicator species should be performed every 5 to 8 years. However, because thallus concentrations of several critical pollutants already exceed background levels, sensitive indicator species from at least some of the reference sites should probably be reevaluated on a three to five year schedule.
2. Reevaluation of the lichen flora at existing reference sites is generally unnecessary, unless over time sensitive indicator species begin to show either increasing levels of pollutant elements or significant changes in relative abundance. At this point reevaluation of the lichen communities at the reference sites in the Manti-La Sal National Forest does not appear to be necessary.
3. Over time additional reference sites should be established in other parts of the forest. These should be set up to reflect the range of habitat types across the forest, as well as general proximity to potential air pollution sources. Possible locations for additional reference sites might include 1) San Pete Ranger District (3): west of Fountain Green, east of Mayfield, and vicinity of Johnson Ridge; 2) Price Ranger District (1): vicinity of Stuart Guard Station; 3) Ferron Ranger District (2): Ferron Canyon and northwest of Emery; 4) Moab Ranger District (1) northeast of La Sal; and 5) Monticello Ranger District (2): vicinity of Maverick Point and northeast of Natural Bridges National Monument.
